# **CUT LESS**

# **Low Grow Fescue**

## **DESCRIPTION:**

A mixture favored over the competitors for its particular blend of fine fescues. Our **Cut Less Low Grow Fescue** is comprised 100% of fine fescues, containing no annual ryegrass or other more, vertical growing species added only to lower the cost of the mix. With more mild winters, species like annual ryegrass can persist from season to season - ruining the desired wispy grassland/Scottish Links aesthetic. **Cut Less** is a LA's dream, perfect for low impact design while keeping interest in the landscape. It is the answer to a homeowners most challenging sites – on a steep slope or above a boulder wall where mowing isn't possible. Under a grove of trees that suck up sun, water and nutrients. Contact us for more design and use ideas!

In **Cut Less**, we also strive to use 60% or more of cultivars proven to be of a higher turf quality under lower inputs. Both TWCA and A-List varieties are tested by independent organizations to require lower use of water, chemical and fertility inputs to retain desired turf quality. That helps you save budgetary maintenance dollars and reduces that turfs environmental impact while providing all the benefits of greenspace of more hard surfaces.

### **MIXTURE HIGHLIGHTS:**

- Leaf texture and color provides interest in any landscape
- Highest possible drought resistance of cool season turf mix
- Once established Cut Less requires management inputs
- Can be left un-cut or cut to 5/8ths inch depending on desired aesthetic. (low cut height will require more water and fertilizer inputs)

**COMPOSITION:** Fine Fescue 20% Cardinal Creeping Red Fescue
