Tuff Turf

Athletic Field & Heavy Traffic

DESCRIPTION:

Tuff Turf is gaining favor with the professional and homeowner alike for its very specific characteristics. Generally considered a mixture for the “transitional zone”, using the newest cultivars of T.T. Tall Fescue with increased winter hardiness we can now incorporate this mixture into design plans and reap the benefits. Great color, rivaling elite bluegrass, fine leaf texture, tremendous turf density as well as the species legendary ability to survive heat and drought long after other mixtures have gone dormant and turned brown.

MIXTURE HIGHLIGHTS:

- An outstanding alternative for bluegrass athletic fields.
- Roots 300% deeper than bluegrass, ryegrass and fescues.
- Improved leaf texture and color over previous generations.
- Rhizomes promote recovery and enhance wear tolerance.
- Resists summer dormancy.
- Tolerates salt loaded soils but is susceptible to ice cover damage.

COMPOSITION:

Turf Type, Lateral Spread	32.50%	Firecracker SLS Tall Fescue (A-list)
Turf Type, Lateral Spread	32.50%	Titanium 2 LS Tall Fescue (A-list)
Turf Type	30%	Supersonic Tall Fescue (A-list)
Kentucky Bluegrass	5%	Bluenote Kentucky Bluegrass

Like or better cultivars may be used based on availability and market conditions.

Seeding Rate / 1000 SF.	Maintenance Level	Water Per Week	Fertilizer N //Yr.	Mowing Height	Lbs/Bag
5 to 7 lbs.	Low to Managed	0.25” to 0.75”	0.5 to 1lbs	2.5” +	25 & 50

SPECIFICATIONS:

Ramy Turf Products uses the highest quality seed available and always selects material based on proven local and regional study and evaluation by third party, independent organizations.

Reliably promised: 98% + purity and 99.99% weed and other crop free!

Seeding Instructions are available on each bag of seed with expanded instructions as well as fertilizer and watering recommendations and product images at ramyturf.com/how.
